

Parking Lot Shading
Shading lot shade trees have been provided throughout the project as required by City of Tulsa code.

The parking lot has been designed to allow for ample shade for trees and low groundcover (hibiscus). In addition shade trees have been provided in major streets and directly adjacent to the parking lot to provide adequate shading of the parking spaces and surrounding drive aisles. A minimum of one tree has been provided for every 100 parking space. In all cases there is a tree within 25' of each parking stall.

The parking lot has been designed to allow for bicycle racks for bikes and low speed vehicles. Pedestrian trails have been provided in finger parking lots and directly adjacent to the parking lot between pedestrian loading of the parking structure and associated drive ways. A number of one way streets have been provided for every one through road. In the eastern portion a one way street has been provided for every one through road. In the western portion a one way street has been provided for every one through road.
